DETAILED ACTION

This action is responsive to the Amendment/Arguments filed on September 4, 2009. Claims 1, 4, 5, 11, 17-19, 21, 22, and 27-29 have been amended. Claims 1-29 are pending.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Cheng-Kang Hsu (Reg. No. 61,007) on January 21, 2010.

The application has been amended as follows:

Specification (Page 8 lines 23-28):

The invention also concerns a method of managing e-mails in a multiple-user environment on a system as described in the first aspect of the invention. In a third aspect of the invention, a non-transitory computer-readable medium containing a computer-readable program code for manipulating computer means for enabling a computer system to perform the method of managing e-mails according to the invention and thereby implementing an EMM system according to the invention on the computer system.

Claims:

Claim 29. A non-transitory computer-readable ~~usable~~ medium having computer-readable program code means providing an e-mail management system for journalising electronic mail in a shared multiple user environment, in which the users' incoming electronic mail are sent and received from external correspondents, said system includes a common mail server with a central storage wherein electronic mail items of the users are stored and may be retrieved, said computer- readable program code comprising:

computer program code means for providing detecting means for monitoring the flow of in- and outbound electronic mails on the mail server to and from the server users, and intercepting at least a selection of the in- and outbound e-mails;

computer program code means for providing journalising means for creating a notification record of a set of e-mail information data for each intercepted electronic mail wherein the users can decide if intercepted electronic mails are to be available for a search query, whereby electronic mails are journalized and shared between a multiple of users;

computer program code means for storing said notification records and the associated electronic mails in an electronic mail manager database (EMM-DB) for storing at least said notification record and each electronic mail in a manner accessible for the users in the multiple users environment, so that the notification records and the associated electronic mails are archived and made accessible for the users in the multiple users environment by a search query;

computer program code means for creating predefined and ad-hoc search queries by a query builder (EQB), said search queries can be applied / submitted to the EMM-DB and wherein a search query is selecting a user-defined series of information data from the notification

records in the electronic mail management database irrespective of recipients or senders of said electronic mails;

computer program code means for storing said predefined and ad-hoc search queries in a query database (QUERY-DB);

computer program code means for providing all users access to queries in the QUERY-DB and electronic mails in the EMM-DB, whereby the electronic mails are searchable independent of senders and recipients; and

computer program code means for defining user access rights to queries in the QUERY-DB and electronic mails in the EMM-DB by access control means (EAC).

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: The prior art fails to teach, suggest, or render obvious either alone or in combination all of the claimed limitations.

Specifically, the prior art fails to teach or suggest the combination of monitoring the flow of in- and outbound electronic mails on the mail server for a specified set of users, intercepting the in- and outbound e-mails, creating a notification record of a set of e-mail information data for each of the intercepted electronic mails - wherein the users can decide if intercepted electronic mails are to be available for a search query and whereby electronic mails are journalized and shared between a multiple of users; an electronic mail manager database for storing said notification records and the associated electronic mails in a relation database so that the

notification records and the associated electronic mails are archived and made accessible for the users in the multiple users environment by a search query; query builder for creating predefined and ad-hoc search queries that can be submitted to the EMM-DB, wherein a search query is selecting a user-defined series of information data from the notification records in the electronic mail management database irrespective of recipients or senders of said electronic mails; a query database for storing said predefined and ad-hoc search queries; user access means for providing, all users access to queries in the QUERY-DB and electronic mails in the EMM-DB, whereby the electronic mails are searchable independent of senders and recipients; and access control means for defining user access rights to queries in the QUERY-DB and electronic mails in the EMM-DB.

Therefore, Claims 1-29 have been deemed allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
